

T11R Rotating Fork Clamp

the safest, most reliable method of handling and inverting combinations of palletized and unpalletized products

Models available

Basic -non sideshifting
Sideshifting
Rotating

Options

Numerous ranges and capacities
Special fork sizes
Quick disconnect mounting

Features

High tensile forks
Two piece floating slide bushings
Self aligning hydraulic cylinders
Light weight slide rail construction

Total Rotating Fork Clamps are used extensively for lifting and inverting palletized products of various sizes and shapes. Hydraulic fork movement allows the forklift operator to position the forks for both wide or narrow pallets without leaving the drivers seat.

Pallet-less products such as bales, cartons or steel/plastic containers can also be picked up by squeezing the forks together, clamping each load, then rotating to the desired position.

The frames of all Totall clamps are constructed from both steel and alloy for a maximum strength to weight ratio.

Many applications can be performed with just this one versatile unit and with the addition of slip-on arms it can be transformed quickly to handle drums, interlocking bricks, paving slabs or other types of products.

Clamping, fork positioning and rotation from the drivers seat!
