

T14CH Stainless Steel Rotator

the ultimate in corrosion resistance
for food processing and pharmaceutical use

Totally
corrosion resistant!

Features

- Stainless steel fabrication
- Stainless steel hardware
- Stainless steel ring-gear*
- Replaceable ring-gear insert*
- High visibility
- Easy lubrication
- Smooth 360 degrees rotation
- Lower fork-stops to support load during rotation

*US Patent No. 5820270
Canadian Patent Pending

Total Stainless Steel Rotators are designed exclusively for food and fish processing plants, where equipment constantly gets saturated with water or brine, and where corrosion cannot be tolerated.

After use, this Rotator can be thoroughly washed down without damaging any of the internal drive bearings that are prone to corrosion on all other units.

Elimination of ball bearings from the stainless steel ring-gear* has dramatically increased rotator lifespan and visibility for the forklift operator, while decreasing container damage.

Stainless fabrication, smooth rotation, and a replaceable inner ring-gear insert, make Total rotators ideal for handling any type of food product.

Non corrosive stainless steel structure and ring-gear!*
