Pull handle to extend inner tube

Total Telescopic Booms are the safest way of temporarily converting your forklift truck into a mobile crane, giving it the capability of lifting many awkward loads. Each boom comes with fork pockets to suit a particular fork size and it is secured to that fork with a quick latch safety chain that prevents the boom from moving forward. The 360 degree swivel hook comes with a safety latch that stops the sling or chain from disengaging. As another safety feature the inner boom can never be fully removed from the outer boom even when fully extended.

Quickly adjusts to the length of your load!
