

T27 Maintenance Platform

all welded steel
and tubular steel construction

Features

Manufactured to suit any forklift truck
Safety screen at rear
High back for operator protection
Non skid floor
Toe-board to prevent tools from falling
Safety chain at rear
Fully enclosed fork pockets

Total Maintenance Platforms are fully welded and enclosed structures made from tubular steel and high quality steel floor plate with a non skid surface.

Built for safety, each unit has a steel safety chain and latch that secures it to the forks of the forklift truck. The forks in turn are enclosed in fork pockets that run under the platform floor and carry the load above.

The rear of the platform is completely covered in safety screen, protecting the operator from the forklift chains and forklift lifting mechanism during elevation.

A toe-board all the way around the lower outer edge protects people below, by preventing tools from falling when working at great heights.

Note

Elevated maintenance platforms may be subject to local regulations or bylaws, please check with your local authority.
