

T7B Basic Hydraulic Clamp

by attaching forks or arms, transform a standard forklift truck into a versatile clamping device capable of lifting various palletized or unpalletized products

Models available

Basic -non sideshifting
Sideshifting
Rotating

Options

Numerous ranges and capacities
Special bolt-on arms or forks
Quick disconnect mounting

Features

High tensile slide rails
Two piece floating slide bushings
Self aligning hydraulic cylinders
Flat face construction for squaring of load
Adaptability to most clamping applications
Compact hydraulic valving with single piece cartridges

Totall Hydraulic Clamps are used extensively for lifting palletized or pallet-less products.

Each clamp has a pair of drilled shoulders that receive either bolt-on arms or bolt-on forks, quickly adapting it for numerous standard or specialized applications

The frames of all Totall clamps are constructed from both steel and alloy for a maximum strength to weight ratio, while the high tensile support rails sliding on polyethylene bushings provide minimal friction during opening or closing.

Hydraulic valving is designed with single piece cartridges for fast replacement in the field during service. All clamps have floating cylinders, designed to eliminate side stresses on the hydraulic seals and cylinder rods during clamping operations.

The basis for all clamping operations!
